

MOFFETT Attachments

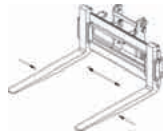

Moffett provides the solution to some of the most unique load handling situations with a variety of attachments for your Truck-mounted Forklift. Designed to handle an assortment of products, the Moffett Attachment Line provides flexibility, safety, and efficiency; giving your business a competitive advantage.

SQUEEZE FORKS

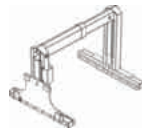

Squeeze Forks are a heavy duty attachment that offer 180 degree rotation used in the recycling and waste management industry. The forks are used as normal when required or can be rotated through 180 degrees to be used as a clamp.

FORK POSITIONER

Fork positioners allow the operator to accurately position the forks from the driver's seat for handling a variety of pallet configurations.

BLOCK GRAB

Block Grabs are used in the brick and block industries to handle a variety of pallet-less products.

BRICK FORK

The brick fork attachment easily allows the driver to manage both pallets and block with tapered fork ends for easier entry. They can be used as 2, 4, or 6 forks depending on the size of the brick bundles.

FOLDING FORK EXTENSIONS

Folding Fork Extensions are used when the customer handles a varied mix of loads of various load centers. The Extensions are folded up and locked when truck mounting or not required.

FORK EXTENSIONS

Fork extensions enable the customer to off load regular loads, long loads, or loads from the far side. They can be removed and stowed in a matter of seconds when truck mounting or not required.

JIB

The hydraulic jib attachment turns your Moffett into a mobile crane which moves bulky sacks. The jib is used in conjunction with folding forks so that the jib arm can fully collapse when not in use or when truck mounting.

REACH FORKS

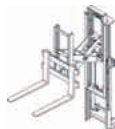

Reach forks allow one side off loading; this type of fork can extend outward to lift the load from the far side of the trailer bed. Reach forks provide up to an extra meter and consists of a standard fork with a second extendable fork.

CARPET POLE

The carpet pole attachment is used for the transport of long lengths of carpet. The carpet is lifted from the inside which protects the bundle from marks and damage.

PANTOGRAPH REACH

The scissor/ pantograph mechanism allows the operator to lift product from one side of the truck/trailer. Similar to the reach forks this device uses a regular section fork where the reach fork is a larger section.

ROTATORS

Rotators are used in various industries from waste management to poultry. This attachment allows flexibility in emptying containers offering a variety of features or angles of rotation from 50° to 360°.
